Introduction

In the past reporting period, educational institutions have increasingly relied on online platforms to streamline assignment submissions. Yet, teachers still face the tedious task of opening each PDF and manually comparing them for copied content—a process that is both time-consuming and prone to human error. Our system removes this bottleneck by extracting text (even from scanned documents) and automatically comparing all submitted PDFs. Instructors then receive a concise similarity percentage for every pair of assignments. This automated approach not only saves educators a substantial amount of time but also guarantees that any instances of copied work are identified promptly.

Summary of Previous Report

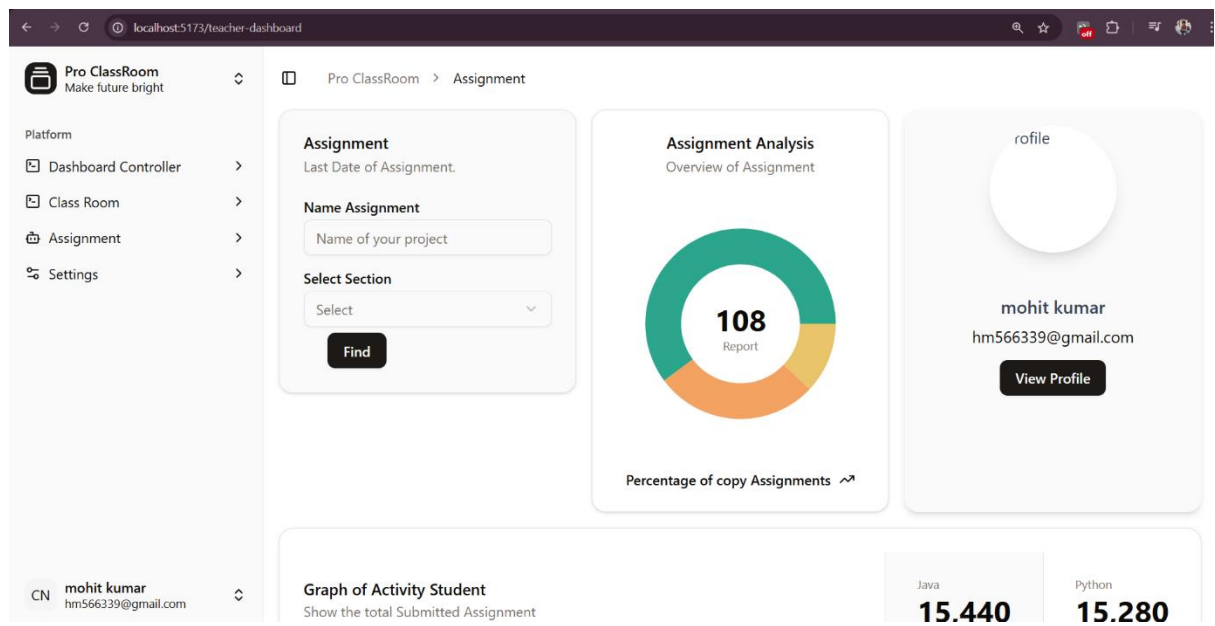

In our first progress report (10–30 May 2025), we laid the groundwork for our automated plagiarism-detection classroom platform by finalizing requirements, deciding the tech stack, distributing the job roles, designing a low level class diagram for our website, designing and coding and implementing the Homepage.

Work Completed Since Last Report

Since our last report we have managed to achieve all the claims that we have made in our previous report here are all of the examples.

Worked Planned for Next Period

- Integration of the plag-detection module using API calls and via other methods.
- Showing the high-lights of the data from the plag-detection module to the dashboard of the teachers.
- Adding detailed information about the similarity of the pdfs in the teacher's dashboard.
- Integration of all the modules and showing the working of the whole system properly.

Conclusion

In this progress report we have managed to create dashboard of different entities like teacher and students. We have also managed to send and receive data as well as update data in the database.

We have managed to achieve all the goals that we have set in the previous reports and Having consistently met our objectives, we are committed to carrying this forward momentum into our next project report.
